SKILLS

React, Redux, Ruby, Ruby on Rails, JavaScript, Python, Node.js, SQL, Docker, GraphQL, Apollo, MongoDB, Express, HTML5, CSS3, AWS, Git, jQuery, RSpec

PROJECTS

FIDELITY FOG (React, Rails, PostgreSQL)

[live](#) | [github](#)

FidelityFog is a full stack clone of the popular SoundCloud that uses Ruby on Rails, PostgreSQL, React, and Redux.

- Deployed custom authentication with Ruby on Rails that uses BCrypt and ActiveRecord to store hashed and salted passwords in order to help guard against malicious interception and unique tokens for persistent user sessions.
- Achieved audio file upload using FormData and FileReader, then sending the data object to a rails controller to be stored on an AWS S3 bucket and attached to the SQL record as an Active Storage attachment.
- Built a responsive track bar UI by utilizing the state design pattern and a currentTrack key to hold the currentTrack info. This state is tracked by the trackBar component and uses React Refs to control the track and display its metadata.

CODE DUELER (React, GraphQL, Apollo, MongoDB, Node.js)

[live](#) | [github](#)

Code Dueler is a collaborative group project that uses MongoDB, Express, Apollo, GraphQL, React and Node.js.

- Implemented a global chat room with React Hooks for maximum reuse and extensibility using Apollo subscriptions with MongoDB message and user collections, allowing for constant message updates and fewer component renders.
- Designed unique UX / UI including a custom text editor that features syntax highlighting for user code submissions sent for processing by Google Cloud Functions, that return results and errors and then relayed to React components in real time.
- Utilized Git workflow across full development cycle for optimal collaboration, accountability, and code ownership.

MUSIC MAESTRO (React, Express, MongoDB, Node.js)

[live](#) | [github](#)

Music Maestro is a tool to find concerts that uses MongoDB, Express, React, Redux, and Node.js.

- Developed specifically for mobile users, each UI element is size optimized for small displays using CSS flexbox so that it also does not sacrifice the experience of desktop users.
- Constructed a Favorites feature by creating custom Express routes, storing event IDs on the MongoDB User document, and then displaying them as needed by fetching the user document and calling populate on the event ID stored on that user.

ROO MAP (JavaScript, HTML5, CSS3)

[live](#) | [github](#)

Roo Map is an interactive map of Bonnaroo Music and Arts Festival that uses vanilla JavaScript, HTML5, and CSS3.

- Transformed standard PDF map into an interactive guide using JavaScript and DOM to calculate cursor position relative to screen and page for precise animations to lend to a more fluid, adaptive user experience.
- Optimized layout across all device types using CSS flexbox and media queries to present a responsive, seamless UX.

EXPERIENCE

Kitchen Manager

Murray's Irish Pub

Jan 2017 - Aug 2019

- Developed new inventory and kitchen staff training, saving hundreds of dollars each month in food cost.
- Trained and mentored service staff in guest relations, to increase overall guest satisfaction and retention.

Healthcare Specialist

US Army Reserve

Oct 2008 - Oct 2016

- Ensured the deployment immunization readiness of thousands of soldiers attached to the 1st Cavalry Division in Fort Hood, Texas over a one year period.
- Earned civilian Emergency Medical Technician certifications and trauma-specific Army medical certifications.

EDUCATION

Web Development - App Academy | Spring 2020
